

Daniel Scott, P.E.

The aging Central Valley Water Reclamation Facility is on the verge of a \$250 million-dollar expansion and sewer rates are on the rise. It is imperative that Cottonwood Heights elects a qualified, competent and hardworking trustee that will fight for the interest of our tax dollars.

For the past 6 years, I have worked for WesTech Engineering, a Utah based company that engineers process equipment for water and wastewater treatment for both the municipal and industrial markets. I have filled many roles from engineering to project management and sales. My current role is a Lead Project Manager for our Industrial Systems Group managing multimillion dollar projects. The experience of working for a company on the cutting edge of new technologies for water treatment will bring a much needed outside perspective to the Cottonwood Improvement District.

I am a graduate of the University of Cincinnati with a Master of Science degree in Environmental Engineering. My research focused on new technologies in municipal wastewater treatment and reclamation. I am also a licensed and practicing Professional Engineer in the State of Utah.
